EducationalBackground

YABA COLLEGE OF TECHNOLOGY, LAGOS

(HND) Metallurgical Engineering (3.46 Upper-Credit)	2024
(OND) Metallurgical Engineering, (3.22 Upper-Credit)	2019

CERTIFICATIONS AND TRANINGS

Red Hat Certified System Administration (RHCSA)	2026
AWS Artificial Intelligence Practitioner (AIF-C01)	2026
AWS Certified Cloud Practitioner (CLF-C02)	2026
Microsoft Certified: Azure security Engineer Associate (AZ-500)	2026
Microsoft Certified: Security, Compliance, And Identity Fundamentals (SC-900)	2025
Fortinet Certified Associate in cybersecurity (FortiGate Associate)	2025
Fortinet Certified Fundamentals in Cybersecurity (FCF)	2024
CISCO Network Academy (Networking Basics)	2024
Microsoft Certified: Microsoft Azure Fundamentals (AZ-900)	2024
Google Digital skills Certification	2019

WorkExperience

IT Service Delivery Analyst 2026

Access Bank Plc — Command Center / IT Engineering Operations

- Coordinated cross-functional IT teams, including network engineers, system administrators, application support specialists, and cybersecurity personnel, to facilitate timely resolution of critical banking infrastructure incidents.
- Monitored enterprise banking infrastructure and mission-critical applications to maintain service availability, operational stability, and business continuity.
- Supported major incident management, technical escalations, root cause analysis, and service restoration across enterprise technology environments.
- Collaborated with infrastructure and engineering teams to identify recurring operational challenges and recommend improvements to system reliability and service delivery.

- Monitored service performance against established SLAs and supported incident reporting, change management, and operational risk mitigation.

- Facilitated communication between technical teams and relevant stakeholders during infrastructure disruptions and planned maintenance activities.

- Supported continuous improvement initiatives focused on IT operational efficiency, infrastructure resilience, and proactive monitoring.

- Monitor enterprise IT infrastructure and services to ensure high availability, performance, and SLA compliance across banking systems
- Coordinate and manage incident response and resolution across cross-functional teams (network, server, applications, and cloud units)
- Perform real-time system monitoring, alert analysis, and escalation of critical issues to relevant Stakeholder teams
- Collaborate with network, system administration, and cloud teams to troubleshoot outages and ensure service continuity
- Support root cause analysis (RCA) and contribute to incident reports and post-incident reviews
- Track and manage tickets using ITSM tools, ensuring timely resolution and proper documentation
- Assist in maintaining system uptime, reliability, and operational efficiency in a high-availability environment
- Work closely with cybersecurity and infrastructure teams to identify potential risks, anomalies, and system vulnerabilities
- Participate in change management processes to minimize service disruption during system updates or deployments.
- Providing periodical report on the availability and downtime of the infrastructure to enhance focus where needed.

Senior DevOps & Cybersecurity Engineer 2024 -2025

Helium Health Technology

1.Cloud Infrastructure & Platform Engineering

- Design, deploy, configure, and maintain secure, scalable, and highly available cloud infrastructure across Microsoft Azure, AWS, and hybrid environments.
- Manage cloud computing resources, virtual machines, networking components, storage services, and cloud-native applications to ensure optimal performance and service availability.

- Implement Infrastructure as Code (IaC) using Terraform, Ansible, and ARM/Bicep templates to automate infrastructure provisioning, configuration, and lifecycle management.
- Develop cloud infrastructure architecture that supports Electronic Medical Records (EMR), Hospital Management Systems (HMS), telemedicine platforms, and other mission-critical healthcare applications.
- Optimize cloud resource utilization, infrastructure costs, and system performance while maintaining operational reliability.

2. DevOps Engineering & CI/CD Automation

- Design, implement, and maintain secure Continuous Integration and Continuous Deployment (CI/CD) pipelines using Azure DevOps, GitHub Actions, GitLab CI, and Jenkins.
- Automate application build, testing, security validation, deployment, and release processes to improve software delivery efficiency.
- Deploy and manage containerized applications using Docker and Kubernetes, ensuring scalability, portability, and consistent deployment across environments.
- Integrate automated security scanning, dependency analysis, container image scanning, and vulnerability detection into software development pipelines.
- Collaborate with software engineering teams to establish deployment standards, version control practices, release management procedures, and rollback strategies.

3. Cybersecurity Engineering & Threat Management

- Develop and implement enterprise cybersecurity controls to protect sensitive patient records, clinical applications, healthcare infrastructure, and organizational information assets.
- Configure and manage network security controls, firewalls, VPNs, endpoint protection solutions, intrusion detection systems, and intrusion prevention systems.
- Implement identity and access management (IAM), role-based access control (RBAC), multifactor authentication (MFA), and privileged access management to secure critical systems.
- Conduct vulnerability assessments, security configuration reviews, and risk evaluations across cloud infrastructure, servers, endpoints, and healthcare applications.
- Monitor security events, investigate suspicious activities, and coordinate cybersecurity incident response and remediation activities.

4. Security Operations & Infrastructure Monitoring

- Implement centralized infrastructure monitoring and observability using Zabbix, Prometheus, Grafana, Azure Monitor, and other enterprise monitoring platforms.

- Configure automated alerting, performance dashboards, log collection, and event correlation to improve visibility across cloud and on-premises infrastructure.
- Integrate security monitoring solutions such as Microsoft Sentinel and Splunk to support threat detection, investigation, and security event analysis.
- Establish proactive monitoring procedures for critical healthcare applications, servers, network devices, databases, and supporting infrastructure.
- Conduct root cause analysis of infrastructure incidents, implement corrective actions, and recommend preventive measures to reduce recurring service disruptions.

5. Healthcare Data Protection & Regulatory Compliance

- Implement technical and administrative safeguards to protect electronic health records, personally identifiable information, and other sensitive healthcare data.
- Support compliance with applicable healthcare data protection regulations and security standards, including the Nigeria Data Protection Act (NDPA), HIPAA where applicable, and ISO/IEC 27001.
- Implement encryption, secure communication protocols, access logging, data retention controls, and secure backup procedures.
- Conduct periodic security risk assessments and collaborate with compliance teams to address identified vulnerabilities and regulatory requirements.
- Support security audits by maintaining accurate documentation of infrastructure configurations, access controls, security incidents, and remediation activities.

6. Business Continuity & Disaster Recovery

- Develop and maintain infrastructure backup, disaster recovery, and business continuity procedures for critical healthcare platforms.
- Implement automated backup schedules, data recovery mechanisms, infrastructure redundancy, and high-availability configurations.
- Participate in disaster recovery simulations, backup restoration testing, and incident response exercises.
- Establish recovery time objectives (RTOs) and recovery point objectives (RPOs) in collaboration with relevant stakeholders.
- Ensure critical digital healthcare services remain resilient during infrastructure failures, cybersecurity incidents, and unexpected service disruptions.

7. Technical Leadership & Engineering Collaboration

- Provide technical guidance and mentorship to junior DevOps engineers, infrastructure administrators, and cybersecurity personnel.
- Collaborate with software developers, IT operations teams, clinical technology specialists, and business stakeholders to deliver secure and reliable digital healthcare solutions.
- Contribute to technology architecture decisions, cloud migration planning, infrastructure modernization, and cybersecurity improvement initiatives.

- Establish technical documentation, standard operating procedures, infrastructure configuration standards, and operational best practices.
- Evaluate emerging cloud technologies, security solutions, and automation tools to identify opportunities for operational improvement and digital transformation.

Independent Monitor (Consultant) **Feb 2025**
World Health Organization (WHO)

• Monitored field activities during a national health campaign to ensure compliance with WHO standards.
• Collected and validated real-time data using the ODK(Open Data Kit) app for reporting and decision Making.
• Ensured accuracy, integrity, and reliability of field data to support campaign evaluation.
• Collaborated with teams to improve reporting efficiency and adherence to health protocols.

AWS APAC Solutions Architecture **January 2025**
Forage.

• Designed and simple and scalable hosting architecture based on Elastic Beanstalk for a client experiencing significant growth and slow response times.
• Described my proposed architecture in plain language ensuring my client understood how it works and how costs will be calculated for it.

Assistant IT Engineer, May 2019 - Dec 2024

Nigeria Gas and Steel LTD (Mouka Pipe Mill Division)

- Assisted senior IT engineers in the installation, configuration, maintenance, and troubleshooting of enterprise IT infrastructure, including servers, workstations, network devices, and peripheral equipment.
- Supported the administration and maintenance of Windows and Linux operating systems, ensuring system stability, availability, and optimal performance.
- Participated in the deployment, configuration, and maintenance of LAN/WAN infrastructure, switches, routers, wireless access points, and network connectivity solutions.
- Assisted in monitoring infrastructure performance, system availability, network traffic, and operational alerts to proactively identify and escalate technical issues.

- Supported user account administration, access provisioning, password management, and security policy enforcement within Microsoft Active Directory and Microsoft 365 environments.
- Collaborated with infrastructure and cybersecurity teams to implement system updates, security patches, endpoint protection, and vulnerability remediation procedures.
- Assisted in deploying and maintaining enterprise applications, business software, and IT services across organizational departments.
- Provided technical support during server installations, system migrations, infrastructure upgrades, and IT equipment deployment projects.
- Participated in troubleshooting hardware failures, software errors, network disruptions, and system performance issues to minimize operational downtime.
- Supported virtualization technologies, including VMware and Microsoft Hyper-V, for virtual machine provisioning, configuration, and infrastructure maintenance.
- Assisted in implementing data backup procedures, system recovery processes, and business continuity measures to protect critical organizational information.
- Maintained technical documentation, network diagrams, hardware inventories, configuration records, and standard operating procedures.
- Worked closely with senior engineers, vendors, and technical service providers to coordinate maintenance activities, resolve infrastructure issues, and ensure successful project delivery.
- Supported IT service management processes, including incident management, service requests, change management, and technical escalation.
- Contributed to continuous improvement initiatives by identifying opportunities for infrastructure optimization, automation, security enhancement, and operational efficiency.

TECHNICAL SKILLS

- Security Tools: (Firewalls, SIEM, IDS/IPS, VPNs)
- Kubernetes, Docker, IAC.
- Incident Management, System Monitoring & Alert Handling (ServiceDesk, AppDynamics Grafana, Seq, Zabbix, Nagios, Splunk, Azure Monitor)
- Operating Systems:(Windows, Linux)
- Cloud Security: (Azure Security, identity & Access Management)
- Networking: (TCP/IP, Routing, Switching, VPN, Nmap, Wireshark)
- System Administration (Red Hat Linux Enterprise RHEL)
- Cybersecurity Fundamentals:(Threats, Vulnerabilities, Risk Management)
- Scripting and Programming: (Power shell, Bash, python, C# HTML, CSS, JAVASCRIPT e.t.c)

LEADERSHIP SKILLS

VICE PRESIDENT:

National Association of Metallurgical and Materials Engineering Student, (NAMMES)
Yaba College of Technology, Lagos.
2019

• **Representative For School Of Engineering At The SUG Level Judiciary Arm (Judge):**
Yaba College Of Technology, Lagos
2021 - 2022.

SKILLS:

Analytical Thinking, Adaptability, Clear communication, Proficient in Microsoft 365, UI/UX Design, Ethical Mindset, Attention to details and a team player, Excellent organization and time management skills, Documentation, Effective problem solving and logical thinking, Teamwork and Leadership, Project management skills and Continuous learning.

REFREE: Available on request.
